

1. REST API server

I used **json-server** (<https://github.com/typicode/json-server>) on my local machine with configuration file **db.json**

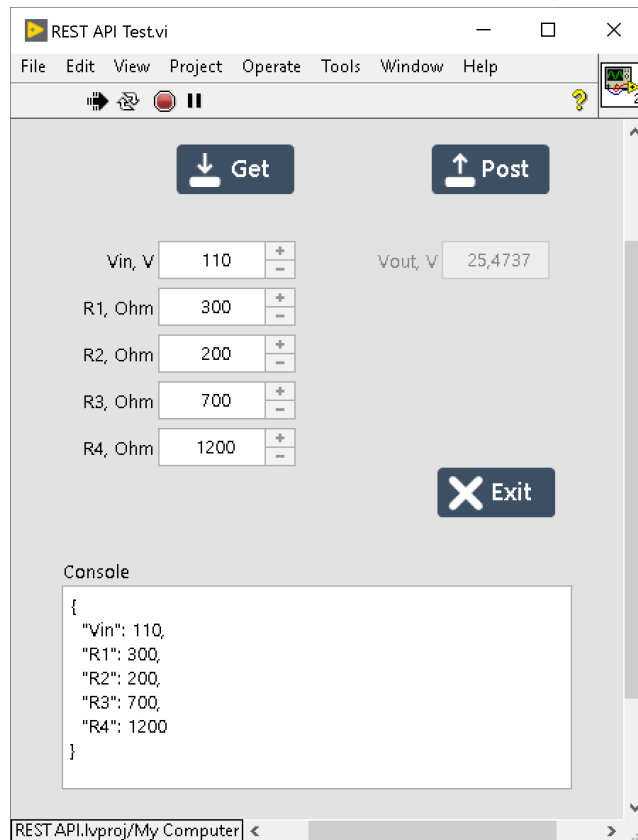

```
{
  "bridge": {
    "Vin": 110,
    "R1": 300,
    "R2": 200,
    "R3": 700,
    "R4": 1200
  },
  "results": [
  ]
}
```

Check connection using Chrome browser:

2. Labview REST API client

After **Get** button pressed

After **Post** button pressed
